Moffitt and ThermoFisher Scientific present an

Educational Flow Cytometry Seminar

March 23th, 2018 Time: 10:00 – 11:00 am

Location: SRB- Ferman Family Conference Room

Taking Your Flow Cytometry to the Next Level – Best Practices and Pitfalls to Avoid

Ramiro Diz, PhD

Application Specialist

Ramiro.Diz@ThermoFisher.com

Abstract:

Flow cytometry has become a powerful tool for biological research, capable of generating volumes of valuable data when employed correctly or mountains of misleading data if potential pitfalls aren't avoided. Although we are equipped with better tools than ever before to do flow cytometry, it can still be a complex technique. In this seminar, using experimental data as examples when possible, we will discuss some essential best practices, how to avoid some common mistakes, and other important considerations needed to fully utilize the power of flow cytometry.
